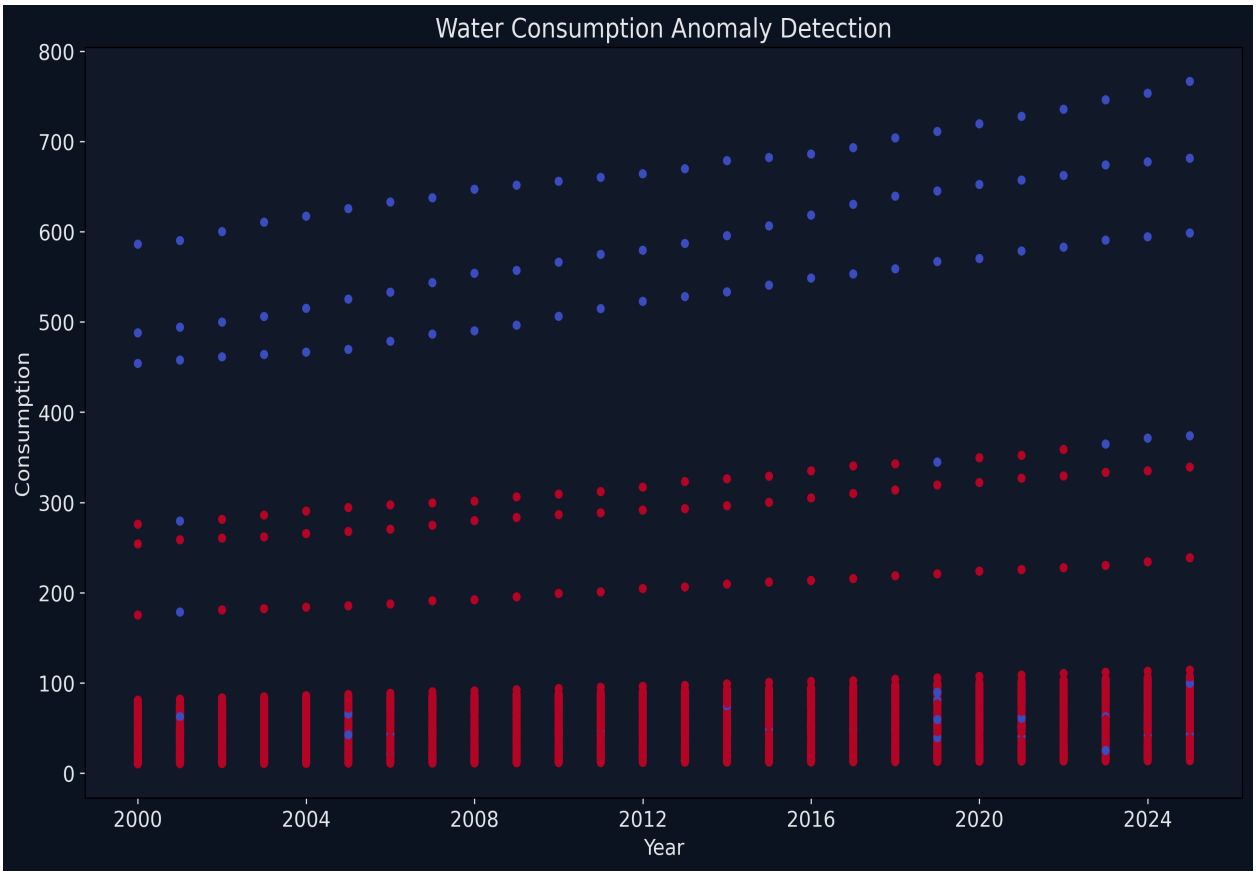
Global Water Consumption Intelligence Report

Executive Summary

Dataset Size: 3900 records
Years Covered: 2000 to 2025
Cluster Quality Score: 0.229
Execution Time: 16.13 seconds

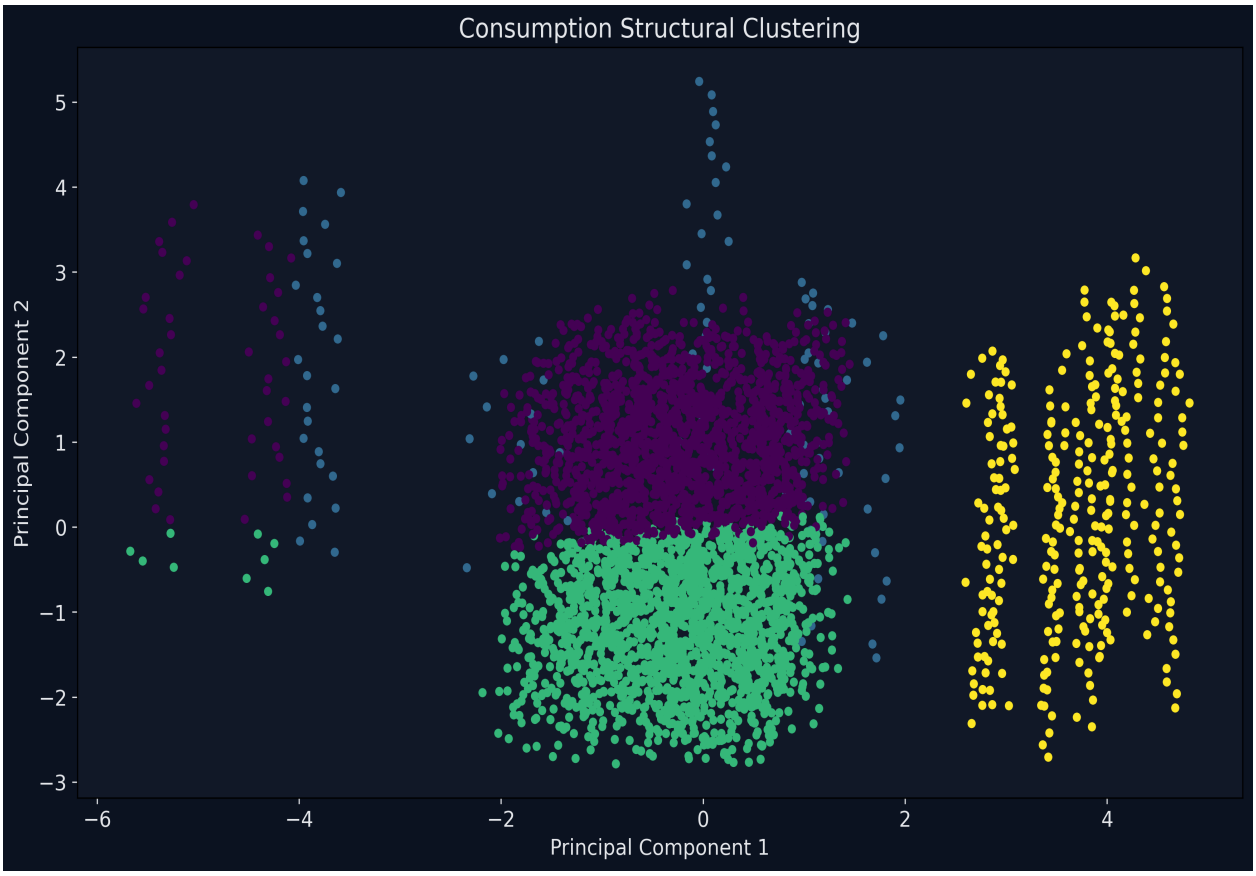
This report provides structural intelligence, anomaly detection, and consumption pattern modeling across regions and time.

Anomaly



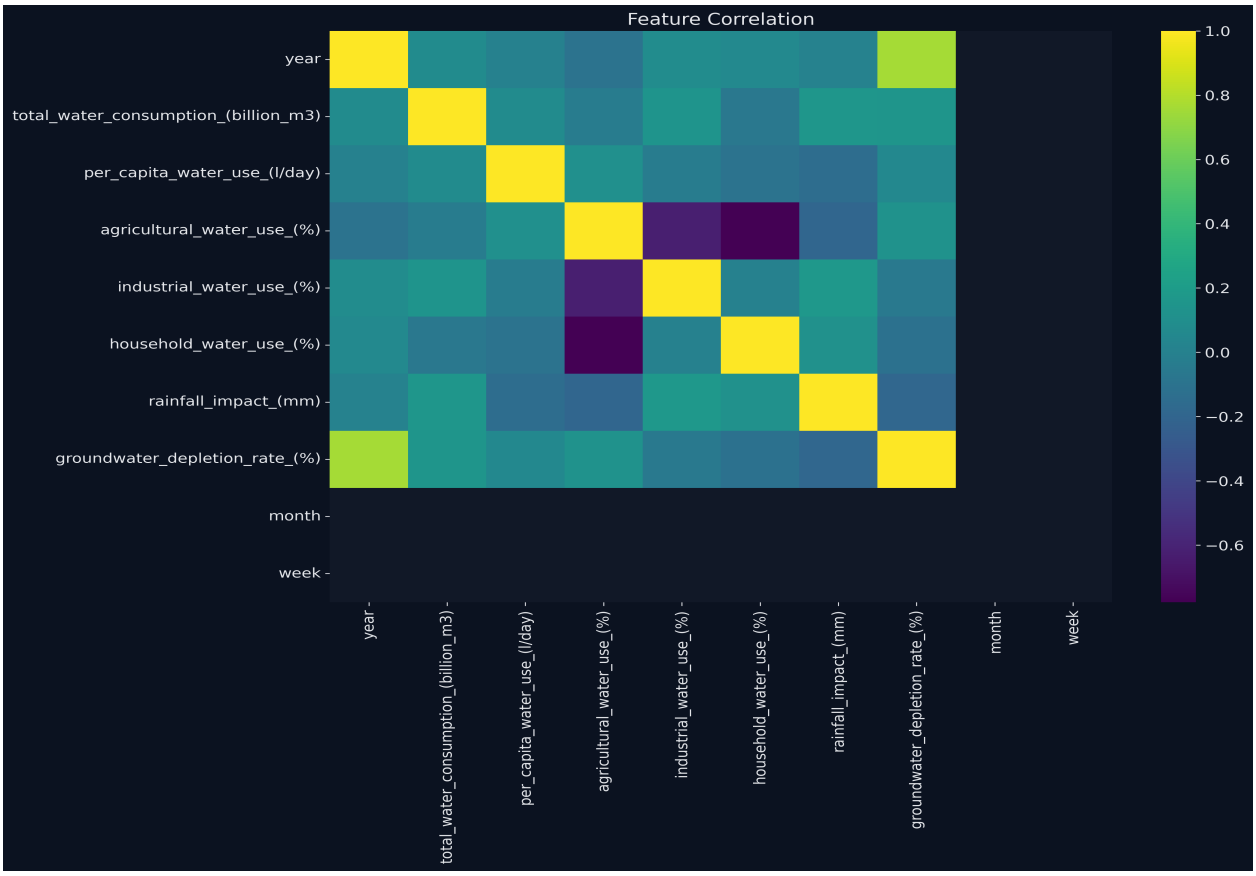
This chart presents structural intelligence extracted from global water consumption patterns.

Cluster



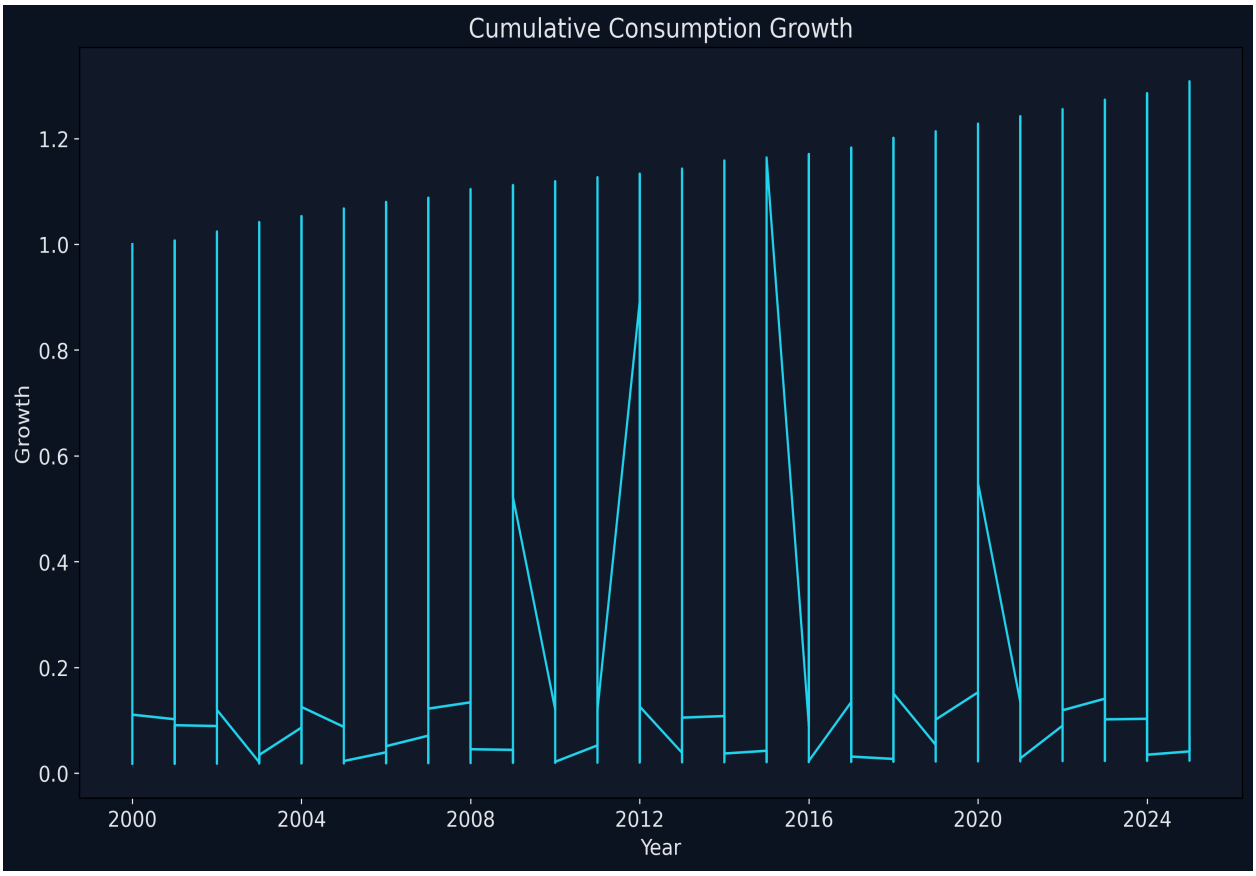
This chart presents structural intelligence extracted from global water consumption patterns.

Correlation



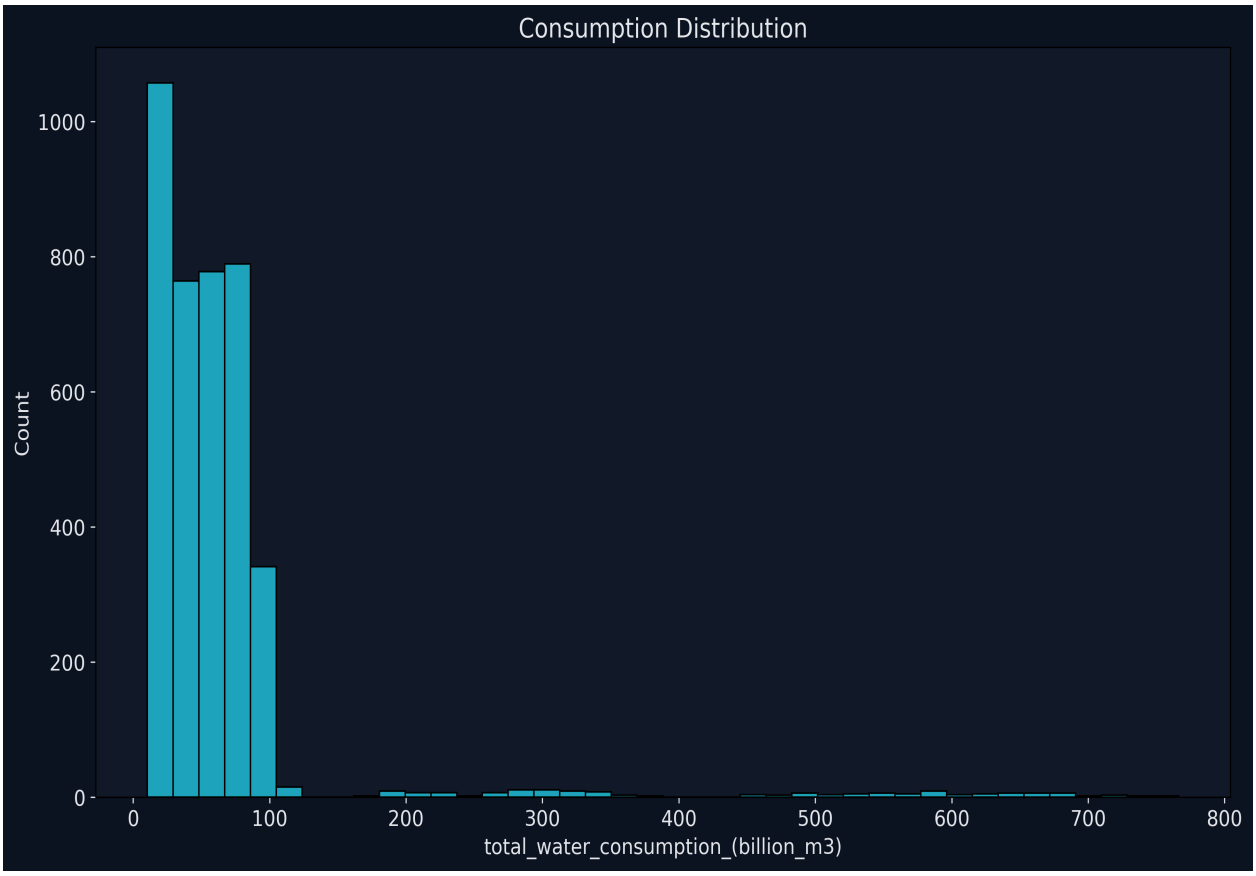
This chart presents structural intelligence extracted from global water consumption patterns.

Cumulative Growth



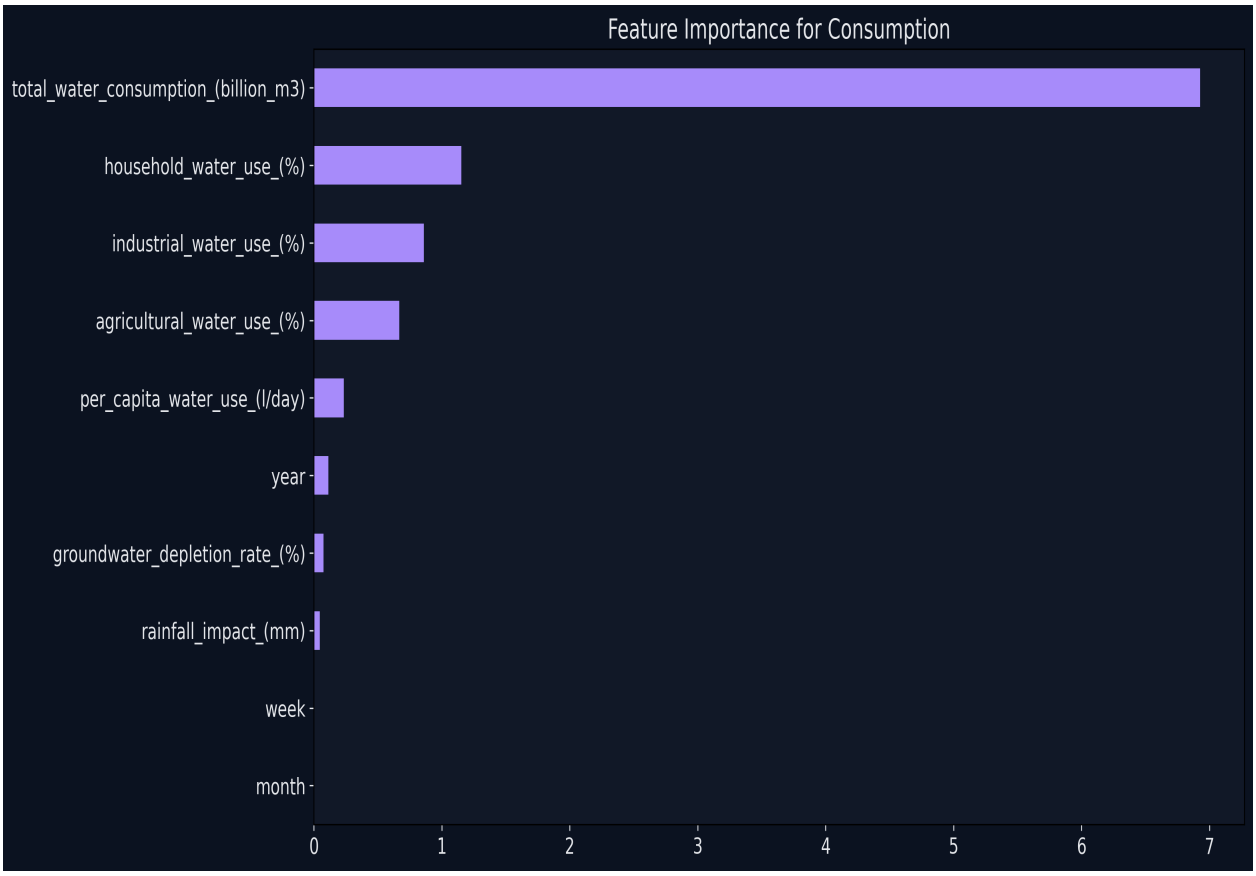
This chart presents structural intelligence extracted from global water consumption patterns.

Distribution



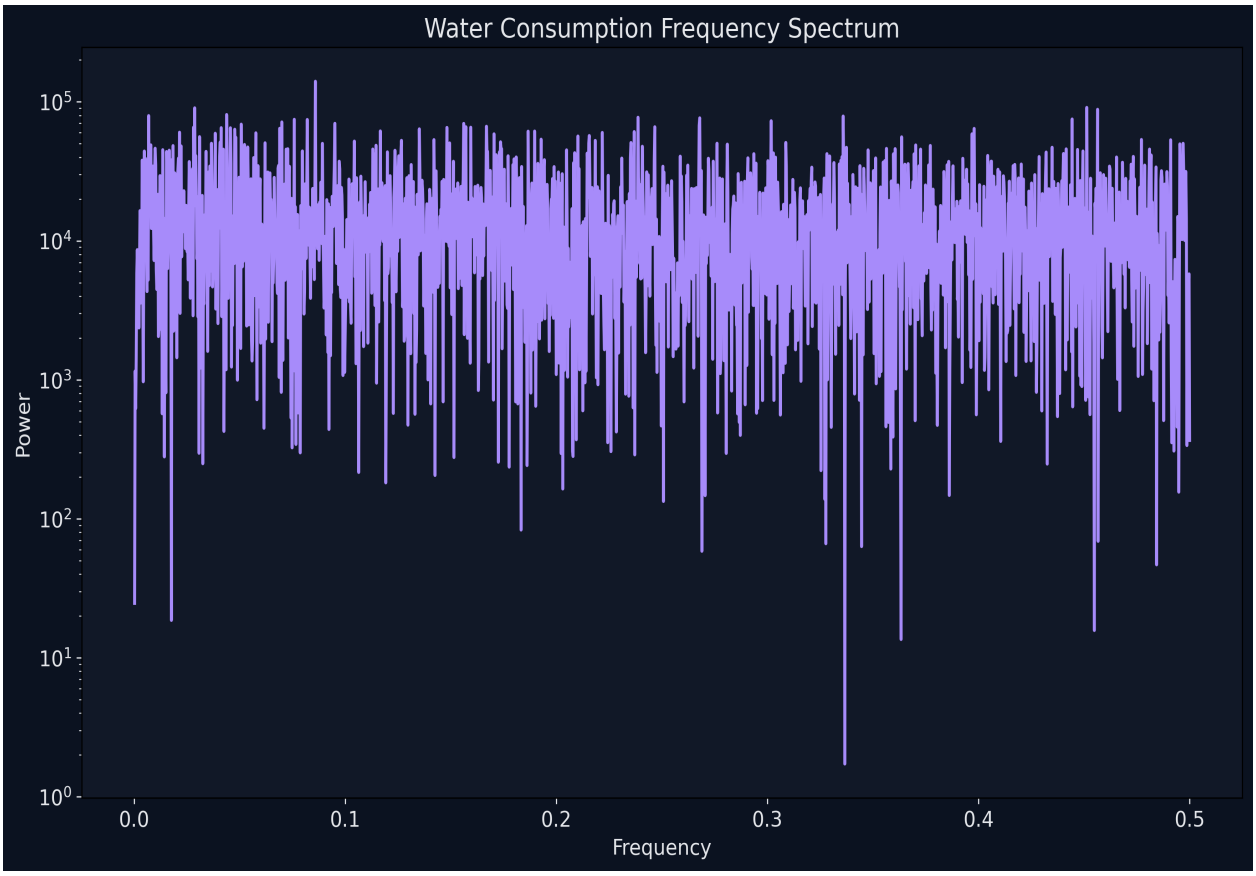
This chart presents structural intelligence extracted from global water consumption patterns.

Feature Importance



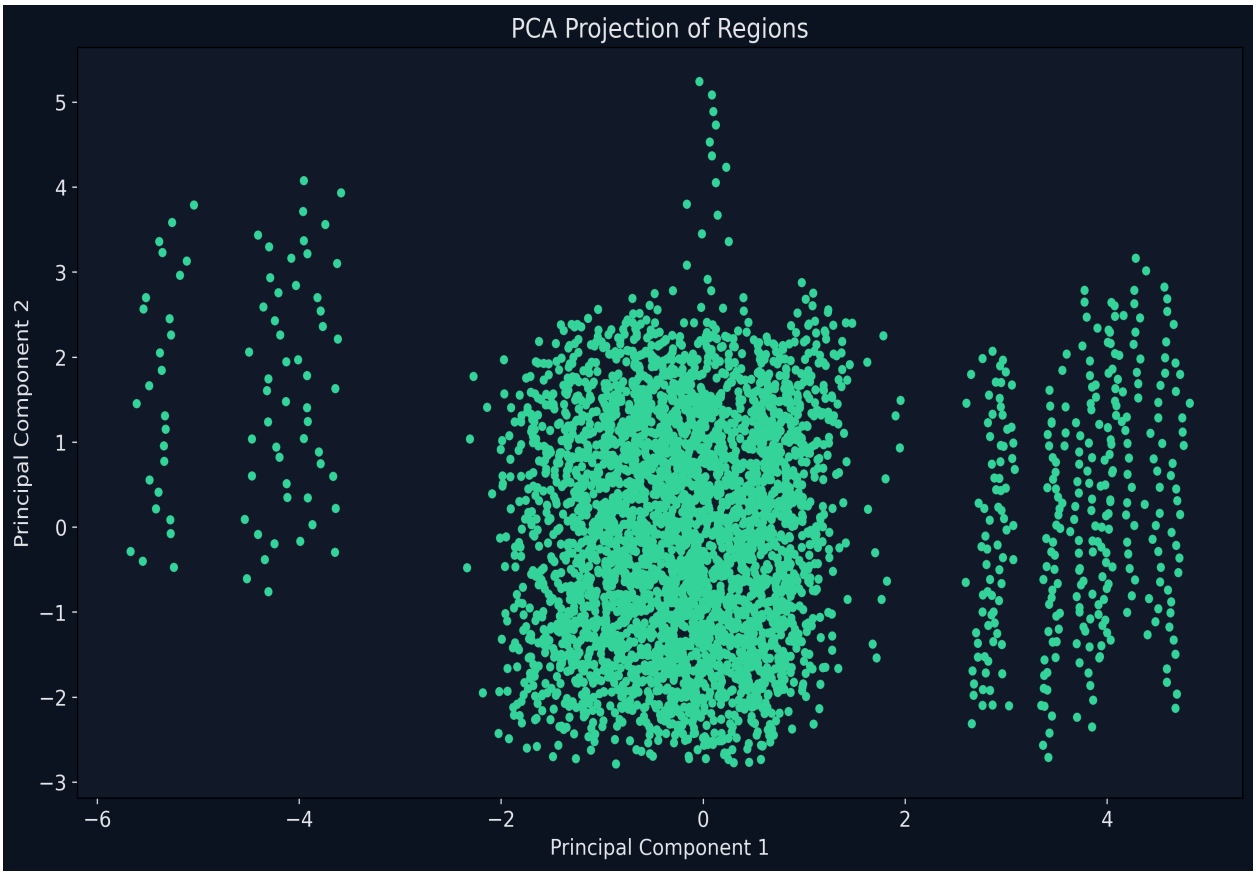
This chart presents structural intelligence extracted from global water consumption patterns.

Fourier



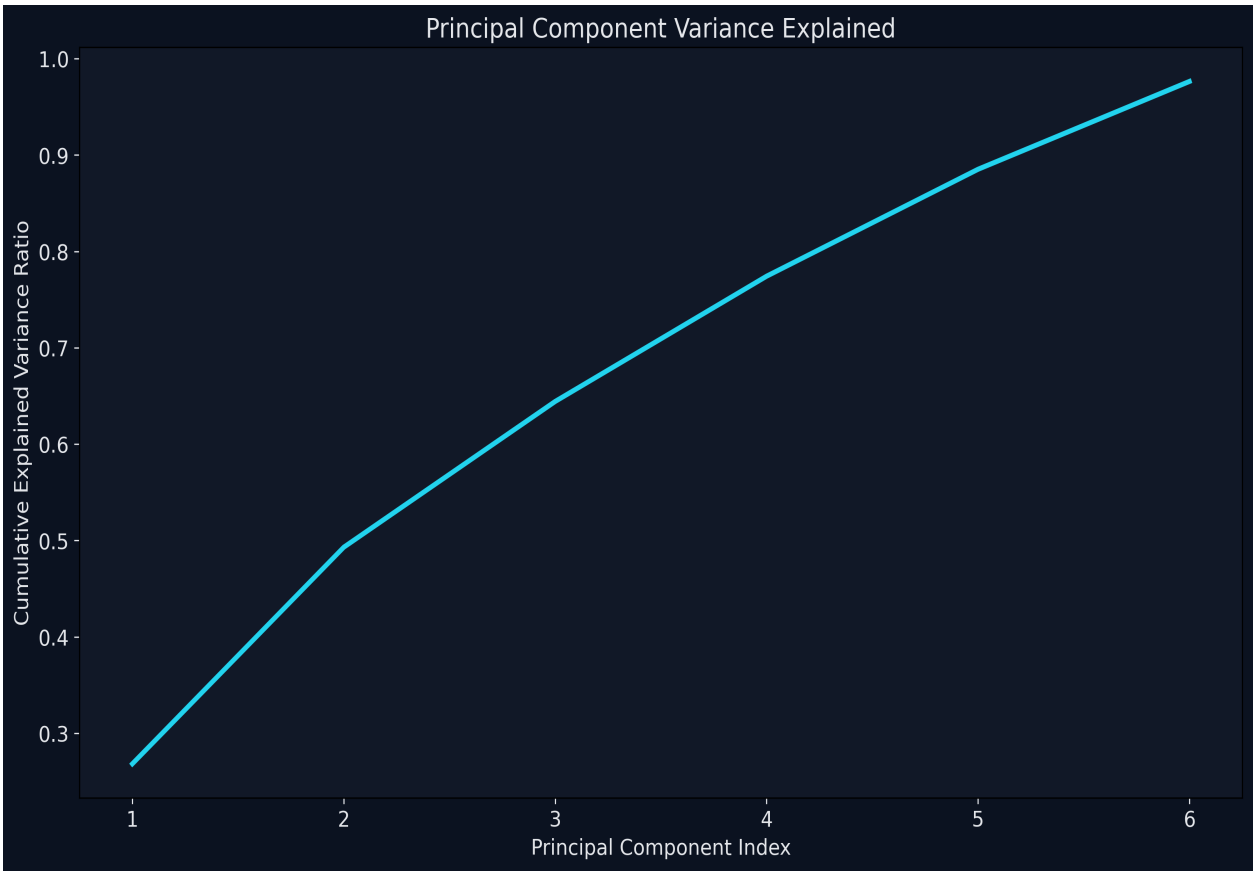
This chart presents structural intelligence extracted from global water consumption patterns.

Pca Projection



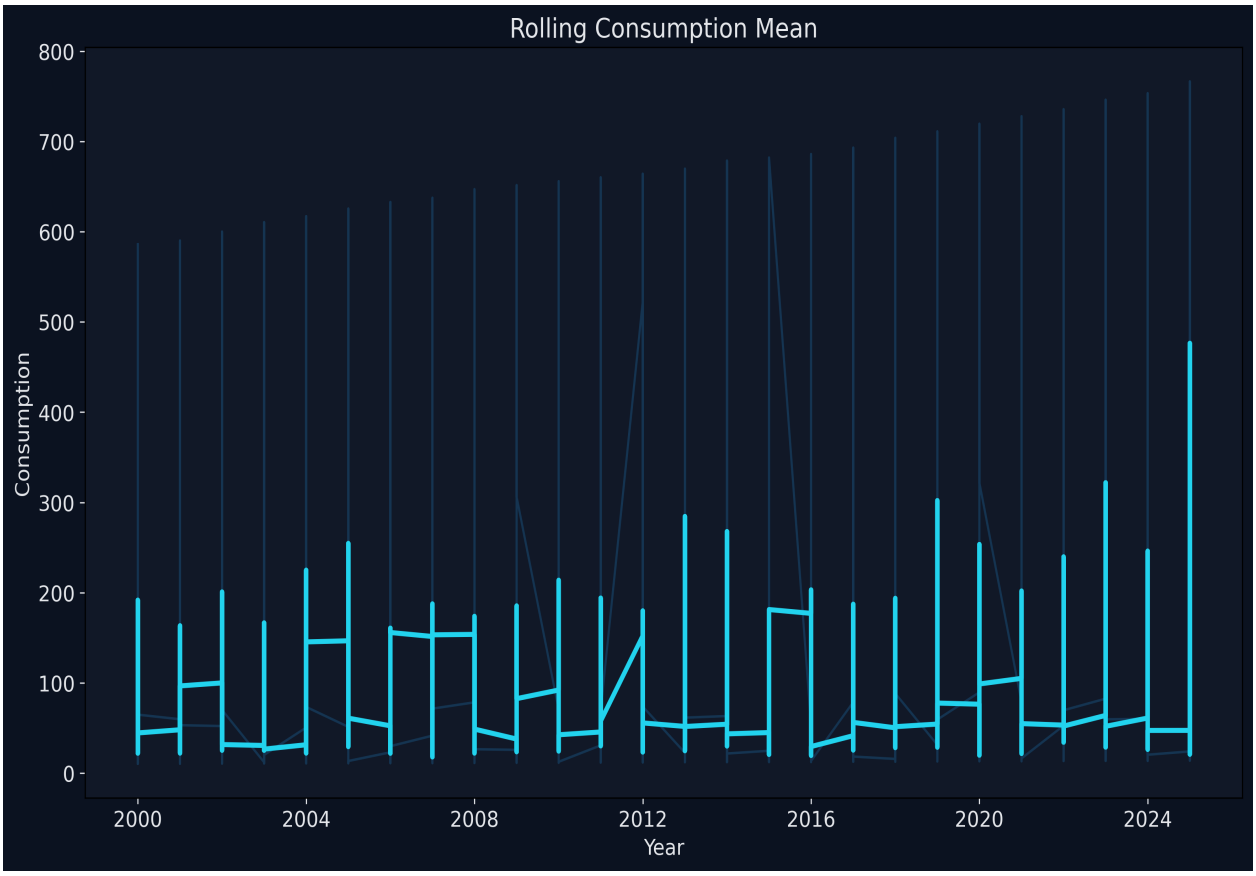
This chart presents structural intelligence extracted from global water consumption patterns.

Pca Variance



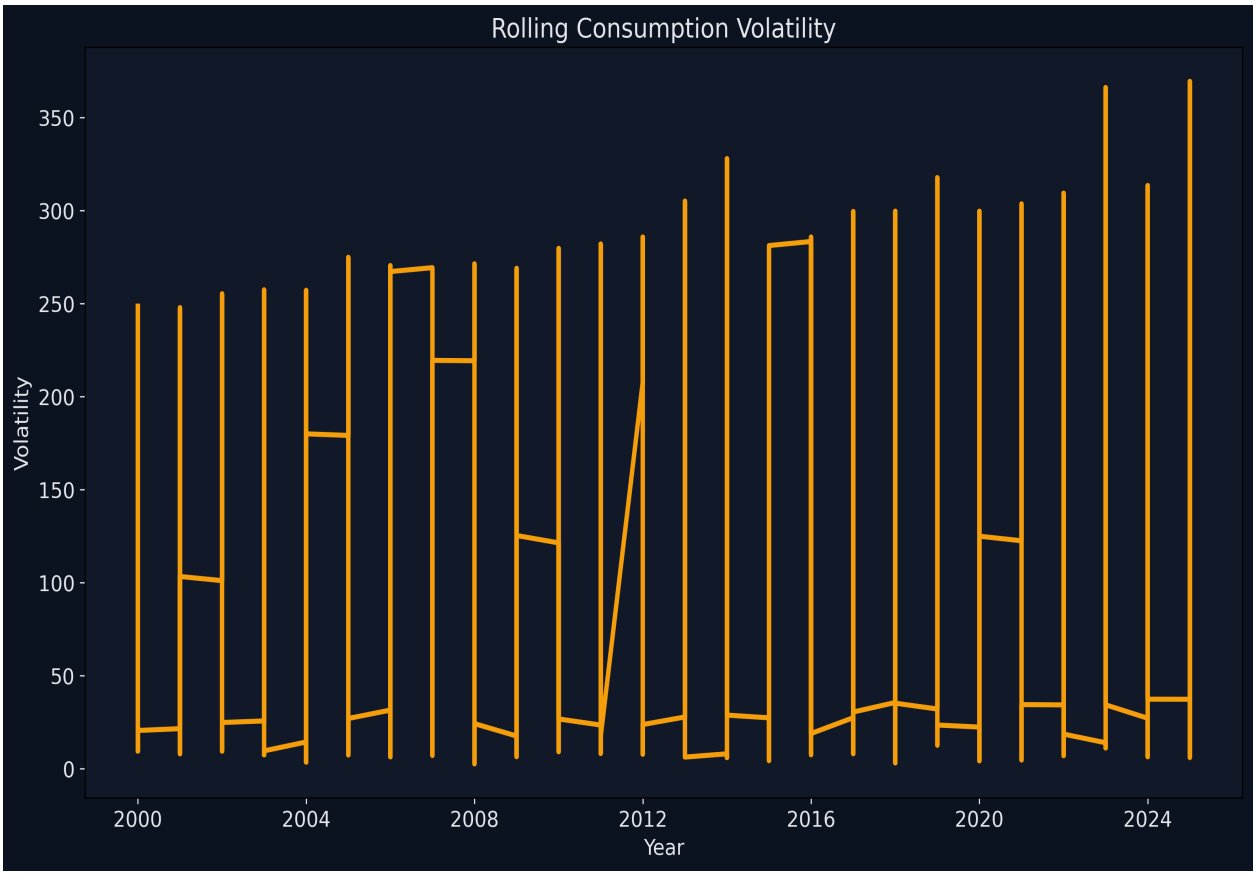
This chart presents structural intelligence extracted from global water consumption patterns.

Rolling Mean



This chart presents structural intelligence extracted from global water consumption patterns.

Rolling Volatility



This chart presents structural intelligence extracted from global water consumption patterns.
